

Zubair Muwwakil - Full Stack Software Engineer

Brooklyn, NY | +1-647-643-5497 | zmuwwakil@gmail.com | LinkedIn: <https://www.linkedin.com/in/zubairmuwwakil/>
GitHub: <https://github.com/zubairmuwwakil> | Website: <https://zubairmuwwakil.com> | USA & Canadian Citizen

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with experience across Java/Spring Boot, Django, .NET, and TypeScript, building data-driven products with strong API design and production reliability (auth, rate limiting, observability, idempotent reprocessing). Comfortable owning database design and performance in PostgreSQL/SQL Server and shipping safely via tests and CI/CD.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript/JavaScript, C#, SQL

Backend: Spring Boot, Django, REST APIs, OpenApi/Swagger

Frameworks: React, Next.js

Data: PostgreSQL, SQL Server (T-SQL), Prisma, Flyway, migrations, indexing/query tuning

Reliability/Observability: Micrometer/Prometheus, OpenTelemetry (OTLP), structured logging, tracing

DevOps/Quality: Docker, GitHub Actions (CI/CD), JUnit, Spring Boot Test, unit/integration testing

PROFESSIONAL EXPERIENCE

G2i Inc. — Software Engineer (Contract) | Remote |

Aug 2025 – Present

- Build and maintain Django backend services (REST APIs, background jobs, data processing) in a PR-driven code review environment.
- Own PostgreSQL/SQL Server changes (schema updates, indexing/query tuning, integrity checks) and ship through Dockerized CI gates.
- Deliver releases safely with unit/integration tests plus data integrity validation to prevent regressions and keep deployments repeatable.

The Senac Group — Financial Software Analyst (FP&A) | Automation & Analytics | Toronto, ON |

Jun 2023 – May 2025

Promoted: Intern → Assistant Financial Analyst → Software Developer.

- Built internal automation and reporting logic in C#/.NET + SQL Server (T-SQL) to improve FP&A data accuracy, repeatability, and close-cycle reliability.
- Automated recurring reporting workflows with SQL + Excel VBA, saving 10+ hours/week across weekly and monthly deliverables.
- Built pipelines to ingest/normalize exports from CRM/ERP/HR/accounting systems and shipped validation dashboards that surfaced discrepancies earlier, reducing rework during close.

Elevation Athletics — Regional Program Coordinator | (Tech & Ops) | Toronto, ON |

Mar 2023 – Present

Promoted: Coach → Lead Coach → District Lead.

- Built and deployed pbsocial.ca, a multi-tenant Next.js/TypeScript/Postgres platform for session scheduling, registrations, attendance, and reporting; scaled from ~50 to 1,000+ participants.
- Engineered core match systems: auto group/match generation, atomic match finalization, and Glicko-2 rating + standings history for reliable competitive play operations.
- Implemented role-based ops workflows and retention analytics (roster/waitlist automation, check-in tooling), contributing to repeat sign-ups increasing from ~20% to ~89% in a tracked cohort (16/18).

PROJECTS

MarketLens — Market Data Pipeline & Analytics Service | Java 21, Spring Boot 4, PostgreSQL, Flyway | Deployed: Render

- Built a market data ingestion + analytics service with API-key auth, OpenAPI/Swagger, and a dashboard; shipped backfills, RSI/MACD, corporate actions, market calendar, and quality reporting.
- Implemented idempotent ingestion with run tracking + retries; ingests ~50k–250k rows/run (~5–30MB CSV) using composite keys, upserts, and yearly partitioning for scalable time-series queries.
- Productionized with rate limiting + quota tracking (Bucket4j), Prometheus metrics, structured logs + correlation IDs, OTLP tracing, and caching for hot paths; added data-quality checks (missing days, duplicates, outliers) to protect backfills.

Loopy — Returns/Subscriptions & Receipt Automation SaaS | Next.js, React 19, TypeScript, Prisma, PostgreSQL | Vercel

Built full-stack SaaS with Clerk auth, Prisma schema/migrations, and dashboard UX (calendar, analytics, ops boards) for returns/refunds, subscriptions/bills, receipts, and shipments.

- Automated receipt ingestion via Gmail OAuth (+ optional IMAP) and PDF/HTML parsing; scans up to ~200 emails/run and extracts ~30–60 receipts with ~88% parse success.
- Built cron-triggered automations (digest/notify/shipping) with Postgres job/run tracking, safe reprocessing, and Resend delivery for auditable, retry-safe notifications

EDUCATION & CERTIFICATIONS

University of Toronto — BSc, Computer Science & Mathematics (Finance/Economics) | 2019 – 2023

Ontario Tech University — MSc, Computer Science (postponed) | 2024 – 2025

University of Calgary — Microsoft Certified: Azure Fundamentals (AZ-900) | 2024
